# 1. INTRODUCTION

During the implementation of the Bologna process the Faculty of Civil Engineering of the University of Rijeka plans to reform the current study programmes (academic, vocational and postgraduate programmes) in line with the principles of the Bologna Declaration, namely in accordance with the propositions of the European Credit Transfer System (ECTS). This will be performed in order to promote student mobility in the Integrated European Higher Education Area.

The Faculty of Civil Engineering of the University of Rijeka organized and started carrying out civil engineering studies as an independent institution in 1976. During a forty-two-year activity a total of **1332 Diploma Engineers** graduated from the Academic Programme, and **1431 Engineers** from the Vocational Programme.

In structuring the new study programmes, the Faculty has followed the past experience in educating civil engineering professionals. For the purpose of integrating Croatia into the European Higher Education and Labour Area, the needs of the labour market have been considered, and the demands that will be set on prospective students, the Faculty, its staff and specialists in civil engineering, have been assessed. Consideration has been given to the fact that the Faculty of Civil Engineering in Rijeka is the only higher education institution in the greater area (the Primorsko-goranska County, the Istrian County, and the Lika-Senj County) that educates civil engineering professionals.

Due to the present-day intense activity in planning, designing and constructing the infrastructure (transportation systems, housing development, water supply systems, etc.) there is a great need for highly educated professionals in civil engineering. Figures show that **there are no unemployed Diploma Engineers and Engineers in Civil Engineering registered with the employment agencies.**

It is safe to say that the trend toward an intense infrastructure construction will also continue in the years to come (during the process of approach and admission of Croatia to the European Union). In the longer term the need to plan and design new civil engineering structures will be transformed into the need to manage, maintain and reconstruct the infrastructure systems. Therefore part of the curriculum has also been adapted to meet this demand. In the course of structuring the curricula, the Faculty cooperated closely with the related Faculties of Civil Engineering in Croatia. **The core curriculum at the Undergraduate Programme Level was brought into tune with the related programmes of the other Faculties of Civil Engineering in Croatia** in order to enable student mobility, first and foremost, at the national level.

In the course of structuring the undergraduate and graduate programmes, the curricula of respectable foreign institutions that educate professionals of the Engineering of Munich: Technische Universität München-Studienplan für same profile (the University of Engineering of Prague, the University of Studierende des Bauingenieurwesens, Eigenossiche Technische Hochschule Zürich-ETH-Abteilung für Bauingenieurwesen in Zürich), as well as the recommendations of the association of European Faculties of Civil Engineering (European Civil Engineering Education and Training – EUCEET) were analysed. This was performed through coordination inside the TEMPUS Project «Restructuring and Updating of Civil Engineering Curriculum» (in which the 4 Faculties of Civil Engineering from Croatia, along with international experts and scientists, were, and still are, cooperating).

The **Faculty teachers** were actively included in structuring the curricula, and the **students** were consulted, too. The structure of the study programme was accepted at the Board of the Faculty of Civil Engineering on 21<sup>st</sup> December 2004.

**The scheme adopted for academic programmes according to education cycles is «3+2+3», namely:**

- Three-year Undergraduate Programme
- Two-year Graduate Programme
- Three-year Postgraduate Programme.

**The Academic Undergraduate Programme proposed represents, in its core part, the continuation of the current Academic Graduate Programme. The curriculum is adapted to the standards of the Bologna process and brought up to date in terms of contents and methodology.**

**The Academic Undergraduate Civil Engineering Programme is the necessary first step in the process of educating highly qualified personnel in the civil engineering and other engineering professions.**

## 2. GENERAL INFORMATION

### 2.1. PROGRAMME NAME

The name of the programme is: **Academic Undergraduate Programme in Civil Engineering.**

### 2.2. PARTY MANAGING AND CARRYING OUT THE STUDY PROGRAMME

The party that manages and carries out the proposed programme is the *Faculty of Civil Engineering of the University of Rijeka* with its basic organisation units: the Chair of Hydraulic Engineering, the Chair of Geotechnical Engineering, the Department of Computer Modelling of Materials and Structures, the Chair of Load Bearing Structures, the Chair of Technical Mechanics, the Chair of Transportation Engineering, the Chair of Construction Organization and Technology and Architecture, the Chair of Mathematics, and the Chair of Physics and other sciences.

### 2.3. PROGRAMME DURATION

The duration of the Academic Undergraduate Programme in Civil Engineering is three (3) academic years, during which students obtain a minimum of 180 ECTS credits.

### 2.4. PROGRAMME ENTRANCE REQUIREMENTS

The right to apply for enrolment on the Academic Undergraduate Programme has a candidate who has completed secondary schooling or has a comparable qualification of at least four years of schooling, or as defined by special Faculty regulations.

The citizens of the Republic of Croatia have the right to apply for the programme. Foreign citizens and persons without citizenship have the right of enrolment under the same conditions.

The selection of enrolment applicants for the Academic Undergraduate Programme is made on the basis of secondary school marks (overall mark, marks in mathematics and physics) and results of compulsory (Mathematics) and elective (Physics or Chemistry or Informatics) of the state high-school exit exam.

### 2.5. COMPETENCES ACQUIRED BY THE STUDENT WITH COMPLETION OF THE PROGRAMME

**With completion of the *Academic Undergraduate Programme* the student acquires the fundamental competences for the planning and design of structures as well as basic knowledge that enables him/her to attend Graduate and Postgraduate Programmes in Civil Engineering or related fields as well as various programmes of lifelong learning.**

During his/her studies the student develops the ability to communicate and inform the interested experts and the public about the problems and solutions connected with the civil engineering profession. He is able, upon analysis, to form an opinion on specific civil engineering issues from the viewpoint of the profession and social usefulness, for example environmental protection.

He is qualified for structural designs in concrete, timber and steelwork and for taking part in planning and designing hydraulic and transportation systems and structures.

He is qualified for independent design of simpler structures or components of complex structures, construction management and supervision of the construction of simpler civil engineering structures and building construction.

The knowledge and competences the student acquires with completion of the Academic Undergraduate Programme are sufficient to attend an Academic Graduate Programme and a Specialisation Programme at the Faculty of Civil Engineering (the proposing party) as well as to attend the same or similar programmes at other Faculties of Civil Engineering in the Republic of Croatia. The acquired fundamental knowledge enables the student to attend graduate programmes of other related engineering programmes.

### 2.6. ACADEMIC TITLE OR DEGREE ACQUIRED ON COMPLETION OF THE PROGRAMME

According to the proposed study programme, the academic title or degree acquired on completion of the Academic Undergraduate Programme is *Bachelor (baccalaureus) of science in civil engineering (univ. bacc. ing. aedif.)*

### 3. PROGRAMME DESCRIPTION

#### 3.1. LIST OF MANDATORY AND OPTIONAL COURSES FOR THE PROPOSED UNDERGRADUATE STUDY PROGRAMME IN CIVIL ENGINEERING

##### List of mandatory courses

	<b>Course code</b>	<b>Mandatory Course</b>	<b>Hours of active classes (L+E+S)</b>	<b>ECTS</b>
1.	M-178	Linear Algebra	30+30+0	6.0
2.	M-183	Mathematical Analysis I	45+45+0	7.5
3.	TM-147	Mechanics I	30+30+0	5.5
4.	M-179	Computers and Information Science	30+25+5	4.0
5.	M-180	Constructive Geometry	45+15+30	6.0
6.	FD-198	Physics	45+15+0	4.5
7.	TM-145	Strength of Materials I	30+30+0	5.5
8.	TM-148	Mechanics II	30+30+0	5.5
9.	P-164	Geodesy	30+15+0	3.5
10.	OA-157	Civil Engineering Structures	30+15+0	4.0
11.	FD-195	The English Language	30+0+30	3.5
12.	FD-196	The German Language	30+0+30	3.5
13.	FD-793	Physical Training and Health Culture	0+30+0	1.0
14.	M-181	Mathematical Analysis II	45+45+0	7.5
15.	TM-146	Strength of Materials II	30+30+0	5.5
16.	G-104	Applied Geology	30+5+0	3.0
17.	TM-150	Structural Mechanics I	45+30+0	6.5
18.	MK-123	Structure and Characteristics of Materials	30+0+0	2.5
19.	H-117	Hydrology	30+15+0	3.0
20.	G-106	Soil and Rock Mechanics	45+20+10	5.5
21.	TM-149	Structural Mechanics II	45+30+0	6.5
22.	H-115	Fluid Mechanics	30+30+0	5.5
23.	P-165	Introduction to Road Design	30+30+0	4.5
24.	MK-124	Engineering Materials	30+30+0	5.0
25.	NK-135	Basics of Concrete Structures	45+30+0	6.0
26.	NK-136	Introduction to Steel Structures	30+30+0	5.0
27.	H-118	Introduction to Hydraulic Engineering	30+30+0	5.0
28.	OA-147	Construction Management and Technology	45+30+0	6.0
29.	G-107	Geotechnical Engineering	45+30+0	6.0
30.	OA-148	Construction Economics	30+15+0	4.0
31.	OA-149	Fieldwork	0+30+0	3.0
32.	ZR-PRED	Final Year Project	0+0+30	5.0

For students some sports and recreational activities coordinated through the course Physical Training and Health Culture are organized.

### List of Optional Courses

	<b>Course Code</b>	<b>Optional Course</b>	<b>Hours of Active Classes (L+E+S)</b>	<b>ECTS</b>
33.	M-182	Engineering Geometry	10+0+20	3.0
34.	M-184	Computer Applications	10+10+10	3.0
35.	M-177	Introduction to Programming	10+20+0	3.0
36.	FD-193	Communication Skills	15+15+0	2.0
37.	FD-199	Introduction to Language Culture	15+15+0	2.0
38.	OA-154	Construction History	15+0+15	2.0
39.	FD-197	Building and Constructing English	10+10+5	2.0
40.	OA-144	Introduction to Spatial Planning	30+0+15	3.0
41.	OA-143	Building Design	15+30+0	3.0
42.	MK-122	Introduction to Building Physics	20+0+10	2.0
43.	G-108	Environmental Protection	15+0+15	2.0
44.	OA-155	Management in Civil Engineering	30+0+15	3.0
45.	OA-156	Civil Engineering Regulations	30+0+0	3.0
46.	NK-134	Bridges	30+15+15	5.0
47.	NK-137	Introduction to Timber Structures	30+30+0	5.0
48.	H-119	Introduction to Coastal Engineering	30+30+0	5.0
49.	H-114	Water Resources and Systems	30+0+30	5.0
50.	P-167	Urban Roads and Intersections	30+30+0	5.0
51.	P-163	Railway Design	45+15+0	5.0

### 3.2. COURSE DESCRIPTION

Explanation of ECTS credits, the quality assessment and the courses delivery success are given in chapters 3.2.2. and 3.2.3. for all subjects.

#### 3.2.1. Description of mandatory and optional courses

##### Student assessment

Note <sup>(1)</sup> – Article 43 of Decision of Amendments of Regulations on Studies from May 3<sup>rd</sup> 2005 (Class: 003-01/05-01/07, Reg. No.: 2170-57-01-05-8) from November 6<sup>th</sup> 2007

Assessment within the European Credit Transfer System

- (1) Student accomplishment in each course is assessed with ECTS grading scale in percentage from 0 to 100%, whereat for the passing grade at the undergraduate studies a student must not score less than 40% and at graduate studies less than 50%.
- (2) Student evaluation and assessment for each course (module) is during classes and at the final exam as follows:
  - total percentage of student accomplishment during classes (attendance, partial exams, preliminary exams and other activities defined by the study program) makes up to 70% of the grade and
  - total percentage of student accomplishment at the final exam makes up to 30% of the grade.

Note <sup>(2)</sup> – Article 43a, paragraph 3 of Decision of Amendments of Regulations on Studies from May 3<sup>rd</sup> 2005 (Class: 003-01/05-01/07, Reg. No.: 2170-57-01-05-8) from November 6<sup>th</sup> 2007

- (3) The students attending courses where a numerical grade is not awarded, as defined by the study program, are given by the professors the allotment “all the requirements met” if they have scored 40 or more credits at the university undergraduate studies or 50 or more credits at university postgraduate studies.

- Enrollment into courses taught in the second and the subsequent study years is defined by Article 34 of Amendments of Regulations on Studies of University of Rijeka or by study prerequisites pursuant to article e.3.2.1 of this study program.

<b>Course:</b>	<b>LINEAR ALGEBRA</b>	
<b>Course code:</b> M-178	<b>Pre-requisites:</b>	<b>Hours of Active Classes:</b> 60 lectures: 30    exercises: 30    seminars: 0
<b>Course status:</b> mandatory	<b>The course consists of:</b> lectures                  exercises                  -	<b>ECTS:</b>    6.0
<b>Course objectives</b>	<p>Students will:</p> <ul style="list-style-type: none"> <li>- become familiar with the concepts such as scalar product, vector product, matrix, inverse matrix, determinant, linear independence, eigenvalue, and eigenvector,</li> <li>- learn to solve linear systems by the Gauss elimination method,</li> <li>- deepen their knowledge about conic sections and quadratic surfaces.</li> </ul>	
<b>Syllabus</b>	<p>The concept of a vector. Magnitude and direction. Addition and subtraction of vectors. Multiplication by a scalar. Coordinate systems in 2D and 3D. Left-handed and right-handed coordinate systems. The angle between two vectors. The scalar product. Projection of a vector onto another vector. The vector product. The scalar triple product.</p> <p>The definition of a matrix. Examples of matrices. The transpose. Addition of matrices. Multiplication by a scalar. Multiplication of matrices. Inverse of a matrix.</p> <p>The determinant. Properties of determinants. The determinant of a product. The adjoint and inverse matrices.</p> <p>Linear independence of rows (or columns) of a matrix. Rank of a matrix. Elementary row operations. Reduced form of a matrix. Computation of the inverse by the Gauss-Jordan elimination.</p> <p>Linear systems. Gauss elimination. Cramer's rule. Homogeneous linear systems. The characteristic polynomial. Eigenvalues and eigenvectors of a matrix.</p> <p>Quadratic forms. Transformation to principal axes. Conic sections and quadratic surfaces.</p>	
<b>Student obligations</b>	Attending lectures and exercises.	
<b>Exam</b>	The exam is taken in written form.	
<b>Assessment <sup>(1)</sup></b>	Preliminary exams (70%), written exam (30%).	
<b>Literature</b>	<p><b>Essential:</b></p> <ol style="list-style-type: none"> <li>1. Notes taken at the classes.</li> <li>2. Elezović, N.: Linearna algebra, 3. izdanje, Element, Zagreb, 2003.</li> </ol> <p><b>Recommended:</b></p> <ol style="list-style-type: none"> <li>1. Jordan, D.W. and Smith, P.: Mathematical Techniques, 3rd edition, Oxford University Press, Oxford, 2002.</li> <li>2. Došlić, T.; Sandrić, N.: Matematika 1, skripta, Građevinski fakultet, Sveučilište u Zagrebu, 2007.</li> <li>3. Elezović, N.; Aglič, A.: Linearna algebra - zbirka zadataka, 3. izdanje, Element, Zagreb, 2003.</li> <li>4. Devidé, V.: Riješeni zadaci iz više matematike s kratkim repertorijem definicija i teorema, Svezak 1, Školska knjiga, Zagreb, 1989.</li> </ol>	

<b>Course:</b>	<b>MATHEMATICAL ANALYSIS I</b>		
<b>Course code:</b> M-183	<b>Pre-requisites:</b>	<b>Hours of Active Classes:</b> 90 lectures: 45    exercises: 45    seminars: 0	
<b>Course status:</b> mandatory	<b>The course consists of:</b> lectures                      exercises                      -	<b>ECTS:</b>    7.5	
<b>Course objectives</b>	<p>Students will revise their knowledge of high-school mathematics, and will learn:</p> <ul style="list-style-type: none"> <li>- to compute limits, derivatives, integrals and Taylor series,</li> <li>- to use derivatives and integrals to: sketch a graph of a function, compute the area of a plane figure, compute the volume and area of a solid of revolution, compute the length of a graph,</li> <li>- to approximate functions by means of Taylor (and some other) polynomials.</li> </ul>		
<b>Syllabus</b>	<p>Basic notions about sets, relations, functions and operations. Natural numbers, integers, rational, real and complex numbers. Sequence, limit of a sequence. The number e. Number line, coordinate systems. Definitions and properties of polynomials, rational functions, trigonometric and area functions, exponential and logarithmic functions as well as hyperbolic and area functions.</p> <p>Limit and continuity of a function. The derivative. Rules of differentiation. Sketching a graph of a function: asymptote, minimum, maximum, point of inflection, intervals of increase and decrease, intervals of upward concavity and downward concavity. Numerical solution of equations.</p> <p>Functions of two variables. Partial derivatives. Extrema and restricted extrema.</p> <p>The antiderivative. The indefinite integral and its properties. Systematic techniques for integration. The definite integral, its properties and applications. Improper integrals. Numerical integration.</p> <p>Series of numbers. Convergence. The Taylor series and the Fourier series.</p>		
<b>Student obligations</b>	Attending lectures and exercises.		
<b>Exam</b>	The exam is taken in a written form.		
<b>Assessment</b> <sup>(1)</sup>	Preliminary exams (70%), written exam (30%).		
<b>Literature</b>	<p><b>Essential:</b></p> <ol style="list-style-type: none"> <li>1. Notes taken at the classes.</li> <li>2. Javor, P.: Matematička analiza 1, 2. izdanje, Element, Zagreb, 2003.</li> </ol> <p><b>Recommended:</b></p> <ol style="list-style-type: none"> <li>1. Došlić, T.; Sandrić, N.: Matematika 1, skripta, Građevinski fakultet, Sveučilište u Zagrebu, 2007.</li> <li>2. Štambuk, Lj.: Matematika 1, Tehnički fakultet, Sveučilište u Rijeci, Rijeka, 2002.</li> <li>3. Anton, H.: Calculus - A New Horizon, 6th edition, John Wiley and Sons, Inc., New York, 1999.</li> <li>4. Demidovič, B.P. i suradnici: Zadaci i riješeni primjeri iz matematičke analize za tehničke fakultete, Golden marketing - Tehnička knjiga, Zagreb, 2003.</li> <li>5. Bronštejn, I.N. i suradnici: Matematički priručnik, Golden marketing - Tehnička knjiga, Zagreb, 2004.</li> </ol>		

<b>Course:</b>	<b>MECHANICS I</b>	
<b>Course code:</b> TM-147	<b>Pre-requisites:</b>	<b>Hours of Active Classes:</b> 60 lectures: 30 exercises: 30 seminars: 0
<b>Course status:</b> mandatory	<b>The course consists of:</b> lectures                      exercises                      -	<b>ECTS:</b>   5.5
<b>Course objectives</b>	<ol style="list-style-type: none"> <li>1. To understand the laws of rigid-body statics under the action of 2D and 3D central and general force systems.</li> <li>2. To learn how to apply these laws in order to determine the reactions and cross-sectional forces and moments in simple beam-like structures.</li> <li>3. To acquire the necessary skills for the courses Mechanics 2 and Strength of Materials.</li> </ol>	
<b>Syllabus</b>	<p>Basic concepts of Mechanics. Vectors and vector spaces. 2D and 3D central force systems. Equilibrium of the central force system; equilibrium of the material particle. 2D and 3D general force systems. The moment of force. Parallel forces. Force couple. Reduction of a system to the force and moment at a given point. Equilibrium of the general force system; equilibrium of a rigid body. Basic types of structures. Supports and reactions. Trusses and forces in truss members. Beams. Constant distributed load. Cross-sectional forces and their diagrams. Statically determinate and indeterminate systems. Beams and frames with hinges and diagrams of cross-sectional forces in such structures. Relations between the cross-sectional forces and the maximum bending moment. Coulomb's friction. Introduction to the principle of virtual work.</p>	
<b>Student obligations</b>	Understanding of the course material is periodically checked via preliminary exams, the results of which are being added to the results of the written exam.	
<b>Exam</b>	The exam is taken in written form.	
<b>Assessment <sup>(1)</sup></b>	Preliminary exams (70%), written exam (30%).	
<b>Literature</b>	<p><b>Essential:</b></p> <ol style="list-style-type: none"> <li>1. Andrejev, V.: Mehanika -- 1. dio: Statika, Tehnička knjiga, Zagreb, 1968.</li> <li>2. Damić, V.: Statika, Hrvatska sveučilišna naklada, Zagreb, 1999 (953-169-045 6)</li> </ol> <p><b>Recommended:</b></p> <ol style="list-style-type: none"> <li>1. <b>Course:</b>	<b>COMPUTERS AND INFORMATION SCIENCE</b>	
<b>Course code:</b> M-179	<b>Pre-requisites:</b>	<b>Hours of Active Classes:</b> 60 lectures: 30    exercises: 25    seminars: 5
<b>Course status:</b> mandatory	<b>The course consists of:</b> lectures                      exercises                      seminars	<b>ECTS:</b>   4.5
<b>Course objectives</b>	The course gives a systematic overview of some important fields of computer and information science, students gain the ability to use networked computers autonomously as the tools to solve engineering problems	
<b>Syllabus</b>	<ul style="list-style-type: none"> <li>- history of computers</li> <li>- computer architecture</li> <li>- computer operating systems - definition, basic functions, comparison of operating systems, computer networks</li> <li>- computer communications and network services - local and global networks, Internet</li> <li>- Universal software tools in Windows environment (text processor, spread sheet, presentation software)</li> <li>- programming languages - machine languages, assemblers, high level languages, compilers, algorithm, program documentation, HTML, JAVA</li> <li>- software packages for engineers</li> <li>- computers in civil engineering: present state of and future trends</li> </ul> <p>Exercises: practical work on computers, the examples relating to the teaching materials are presented</p>	
<b>Student obligations</b>	All of the given tasks on the computer and seminar must be made.	
<b>Exam</b>	The exam is taken in written form.	
<b>Assessment <sup>(1)</sup></b>	Preliminary exams (70%), written exam (30%).	
<b>Literature</b>	<p><b>Essential:</b></p> <ol style="list-style-type: none"> <li>1. course materials presented on the web site <a href="http://www.gradri.hr/~informatika">www.gradri.hr/~informatika</a></li> <li>2. the relevant web site addresses presented on the course web site</li> <li>3. Grundler, Darko: Primijenjeno računarstvo, Graphis, Zagreb, 2000</li> <li>4. Čerić, V.; Varga, M. i dr.: Poslovno računarstvo, Znak, Zagreb 1998.</li> </ol> <p><b>Recommended:</b></p> <ol style="list-style-type: none"> <li>1. Blissmer, Robert H.: Introducing computers. John Wiley &amp; Sons, Inc., 1996</li> </ol>	

<b>Course:</b>	<b>CONSTRUCTIVE GEOMETRY</b>		
<b>Course code:</b> M-180	<b>Pre-requisites:</b>	<b>Hours of Active Classes:</b> 90 lectures: 45    exercises: 15    seminars: 30	
<b>Course status:</b> mandatory	<b>The course consists of:</b> lectures                    excercises                    seminars	<b>ECTS:</b>   6.0	
<b>Course objectives</b>	<ul style="list-style-type: none"> <li>- to develop space perception ability</li> <li>- to learn fundamental principles of computer graphics in 3D and descriptive geometry</li> <li>- to develop constructive problem solving skills in 3D and representing in projections</li> <li>- to introduce geometrical thinking and creative approach to the use of CAD in 3D</li> <li>- to acquire fundamental principles of geometric computer modelling</li> </ul>		
<b>Syllabus</b>	<ul style="list-style-type: none"> <li>- introduction to visual communication; basic elements in geometry and graphics</li> <li>- Monge's-projection and descriptive geometry; use in CAD-systems</li> <li>- additional views in classic and CAD technology: metric and position-problem solving, the use of 3D computer graphic</li> <li>- geometric transformations</li> <li>- conics - properties and use</li> <li>- rotating 2D objects (plane figure) in 3D space (use of affine transformation and CAD)</li> <li>- geometric forms of solids; regular polyhedra, 3D- primitives in CAD</li> <li>- irregular solids. Tangent plane.</li> <li>- axonometry, use in CAD</li> <li>- solid -cutting plane. Intersections of line and solid.</li> <li>- basic of solid-intersections and Boolean operations on 3D primitives</li> <li>- basics of quoted projections; terrains</li> </ul>		
<b>Student obligations</b>	<ul style="list-style-type: none"> <li>- course attendance</li> <li>- active collaboration - seminars</li> <li>- accepted project work before the end of the term</li> </ul>		
<b>Exam</b>	Written and oral exam. Part of the exam can be taken using the computer.		
<b>Assessment <sup>(1)</sup></b>	Seminar, presentation of seminar, programme work and preliminary exams (70%), written exam (30%).		
<b>Literature</b>	<p><b>Essential:</b></p> <ol style="list-style-type: none"> <li>1. Pletenac, Lidija: Konstruktivna geometrija u CAD-u, elektronički udžbenik-skripta</li> <li>2. Niče, dr. <b>Course:</b>	<b>PHYSICS</b>	
<b>Course code:</b> FD-198	<b>Pre-requisites:</b>	<b>Hours of Active Classes:</b> 60 lectures: 45 exercises: 15 seminars: 0
<b>Course status:</b> mandatory	<b>The course consists of:</b> lectures                      exercises                      -	<b>ECTS:</b>   4.5
<b>Course objectives</b>	The main goal of the course is to help understanding in basic physical laws in which the knowledge of computer use will be required.	
<b>Syllabus</b>	Idea of space and time. Basic forces in nature. Mechanical oscillations. Harmonic, damped and enforced oscillator. Internal energy and heat. Thermodynamical laws. Entropy. Surface phenomena. Capillarity. Diffusion. Elastic waves. Sounds. Solid deformation. Elastic and plastic properties. Hook's law. Torsion. Electric and magnetic interaction. Electromagnetic waves and nature of light. Law of heat radiation. Periodic system of elements. Radioactivity. Molecular forces. Crystal lattice.	
<b>Student obligations</b>	Students are obliged to attend lessons and take preliminary exams.	
<b>Exam</b>	The exam is written in which, apart from solving problems, the knowledge of theory is required.	
<b>Assessment</b> <sup>(1)</sup>	Preliminary exams (70%), written exam (30%).	
<b>Literature</b>	<p><b>Essential:</b></p> <ol style="list-style-type: none"> <li>1. Kilić, S.: Fizika I, Fakultet građevinskih znanosti u Splitu, 1986.</li> <li>2. Cindro, N.: Fizika II, Školska knjiga, Zagreb, 1984.</li> </ol> <p><b>Recommended:</b></p> <ol style="list-style-type: none"> <li>1. Cindro, N. Fizika I, Školska knjiga, Zagreb, 1981.</li> </ol>	

<b>Course:</b>	<b>STRENGTH OF MATERIALS I</b>	
<b>Course code:</b> TM-145	<b>Pre-requisites:</b>	<b>Hours of Active Classes:</b> 60 lectures: 30 exercises: 30 seminars: 0
<b>Course status:</b> mandatory	<b>The course consists of:</b> lectures exercises -	<b>ECTS:</b> 5.5
<b>Course objectives</b>	<ol style="list-style-type: none"> <li>1. To understand the physical meaning of stresses and strains and their role in uniaxial and simple states of equilibrium and kinematics of deformable media.</li> <li>2. To learn how to solve such problems in mechanics of deformable media where uniaxial or simple stress states take place.</li> <li>3. To acquire necessary skills for the courses Strength of Materials 2, Structural Mechanics 1, Materials 1, Steel Structures, Concrete Structures and Timber Structures.</li> </ol>	
<b>Syllabus</b>	<ol style="list-style-type: none"> <li>1. Uniaxial stress-strain state. Linear elasticity.</li> <li>2. Governing equations of elasticity (equilibrium, kinematic, constitutive). Bar problems.</li> <li>3. Pure bending. Geometric properties of cross-sections.</li> <li>4. Force-induced bending. 3D bending.</li> <li>5. Bending due to axial force.</li> <li>6. Bernoulli's theory of beams.</li> <li>7. Differential equation of deformation of a bent beam.</li> <li>8. Beam on elastic foundation.</li> <li>9. Mohr's analogy.</li> <li>10. Pure shear. Design of bolts and rivets.</li> <li>11. Pure torsion. Statically indeterminate torsion problems.</li> <li>12. Introduction to geometric non-linearity. Stability of equilibrium states.</li> <li>13. Buckling.</li> <li>14. Introduction to material non-linearity.</li> <li>15. Elastic-plastic bending.</li> </ol>	
<b>Student obligations</b>	Understanding of the course material is periodically checked via preliminary exams, the results of which are added to the results of the written exam.	
<b>Exam</b>	The exam is taken in written form.	
<b>Assessment <sup>(1)</sup></b>	Preliminary exams (70%), written exam (30%).	
<b>Literature</b>	<p><b>Essential:</b></p> <ol style="list-style-type: none"> <li>1. Šimić, V. Otpornost materijala 1 i 2, Školska knjiga, Zagreb, 1992, 2002</li> <li>2. Brnić, J, Turkalj, G. <b>Course:</b>	<b>MECHANICS II</b>	
<b>Course code:</b> TM-148	<b>Pre-requisites:</b>	<b>Hours of Active Classes:</b> 60 lectures: 30 exercises: 30 seminars: 0
<b>Course status:</b> mandatory	<b>The course consists of:</b> lectures                      exercises                      -	<b>ECTS:</b>   5.5
<b>Course objectives</b>	<ol style="list-style-type: none"> <li>1. To understand Newton's laws of dynamics in cases of motion of particles and rigid bodies.</li> <li>2. To learn fundamental principles of Lagrange's analytical dynamics.</li> <li>3. To learn how to apply these principles to simple problems of engineering dynamics and theory of oscillation.</li> <li>4. To acquire necessary skills as a pre-requisite for the course Hydromechanics.</li> </ol>	
<b>Syllabus</b>	<p>Newton's laws of dynamics. Equations of motion. Kinematics of a particle. Position, velocity and acceleration as vectors. Kinematics of curvilinear motion. Choice of the observer and the co-ordinate system. Dynamics of curvilinear motion of the material particle. Central force system. Impulse of the force and momentum. Angular momentum. Work and power. Laws of dynamics as applied to rigid bodies. Euler's equations and moments of inertia. 2D motion of the rigid body. Angular momentum around a principal axis of inertia. 3D motion of the rigid body. Euler's angles and rotation of the Earth. Free and forced undamped and damped oscillations of the material particle. Dynamics of the systems of material particles. Eigenvalue problem. Principle of virtual work in dynamics. Action integral and Hamilton's principle. Lagrange's equations and their application to the systems of concentrated masses and springs. Introduction to the dynamics of deformable bodies. Cauchy's equations of motion.</p>	
<b>Student obligations</b>	Understanding of the course material is periodically checked via three preliminary exams, the results of which are being added to the results of the written exam.	
<b>Exam</b>	The exam is taken in written form.	
<b>Assessment <sup>(1)</sup></b>	Preliminary exams (70%), written exam (30%).

<b>Course:</b>	<b>PHYSICAL TRAINING AND HEALTH CULTURE</b>
----------------	---------------------------------------------

<b>Course code:</b> FD-793	<b>Pre-requisites:</b>	<b>Hours of Active Classes:</b>		
<b>Course status:</b> optional	<b>The course consists of:</b> - exercises -	lectures:	exercises:	seminars:
		<b>ECTS:</b> 1.0		

<b>Course objectives</b>	Objective of the Course is to provide by physical training such an educational which will stimulate student's curiosity, improve their intellectual development and prepare them for their professional competence. Physical training develops their abilities to be successful in various scientific fields.
<b>Syllabus</b>	Group or individual exercises (fitness, tennis, swimming, climbing etc), but depending on the material and financial possibilities of the Faculty to provide necessary and adequate means.
<b>Student obligations</b>	Presence to the activities to be recorded by lecturer's signature
<b>Exam</b>	Not applicable
<b>Assessment (2)</b>	Not applicable
<b>Literature</b>	<p><b>Essential:</b> Not obligatory</p> <p><b>Recommended:</b> Literature related to the sports specified in Syllabus</p>

<b>Course:</b>	<b>MATHEMATICAL ANALYSIS II</b>	
<b>Course code:</b> M-181	<b>Pre-requisites:</b> Mathematical analysis I	<b>Hours of Active Classes:</b> 90 lectures: 45    exercises: 45    seminars: 0
<b>Course status:</b> mandatory	<b>The course consists of:</b> lectures                  exercises                  -	<b>ECTS:</b>  7.5
<b>Course objectives</b>	The main goal of the course is to help students understanding in differential equations and basic principals of statistics.	
<b>Syllabus</b>	<p>Arc length. Multiple integrals with applications.            Derivation and integration under integral. Real functions of several real variables. Partial derivation. Vector analysis, gradient, divergence, rotation. Line integrals. Surface integrals.            Differential equations. Cauchy problem. Linear differential equations.            Systems of linear differential equations. Numerical solve of differential equations. Partial differential equations. Fourier method. Method of separation of variables. Power series solutions.            Wave equation. Diffusion equation. Variation princip.            Numerical solve of partial differential equations. Method of discrete variation. Eigenvalue problem. Principal statistical values.            Stochastic processes. Correlations function.            Statistical tests with applications.</p>	
<b>Student obligation</b>	Students are obliged to attend lessons and to make seminar.	
<b>Exam</b>	The exam is written in which, apart from solving problems, the knowledge of theory is required.	
<b>Assessment <sup>(1)</sup></b>	Preliminary exams (70%), written exam (30%).	
<b>Literature</b>	<p><b>Essential:</b></p> <ol style="list-style-type: none"> <li>1. Kurepa, S.: Matematička analiza 1, Školska knjiga, 1975.</li> <li>2. Kurepa, S.: Matematička analiza 2, Školska knjiga, 1975.</li> <li>3. B. Apsen, B.: Riješeni zadaci više matematike 1, 2, 3, Tehnička knjiga, Zagreb, 1989.</li> <li>4. <b>Course:</b>	<b>STRUCTURAL MECHANICS I</b>	
<b>Course code:</b> TM-150	<b>Pre-requisites:</b> Mechanics I	<b>Hours of Active Classes:</b> 75 lectures: 45    exercises: 30    seminars: 0
<b>Course status:</b> mandatory	<b>The course consists of:</b> lectures                      exercises                      -	<b>ECTS:</b>          6.5
<b>Course objectives</b>	At the end of the course unit the student is expected to be able to prepare static calculation of line statically determinate constructions of engineering structures under unmovable and movable loads.	
<b>Syllabus</b>	Types of structures. Types of loads. Concept of structure. Kinematic and static stability of structures. Equations of statics. Principles of virtual work, minimum potential energy, superposition, symmetry and antisymmetry. Application of static methods for the calculation of various statically determinate constructions: simply supported beam, cantilever beam, overhanging beams, combined beams (Gerber's beams), indirectly loaded girders, frames. Plane and space trusses: types of trusses and calculation methods (methods of joints, methods of sections, method of changing bars). Three-hinged systems. Supported and reinforced beams. Application of kinematic methods for the calculation of statically determinate constructions. Influential functions and influential lines. Use of influential lines. Determination of influential lines on the simple and complex girders. Procedures of determination of displacements in statically determinate constructions. Method of the unit load.	
<b>Student obligations</b>	<ul style="list-style-type: none"> <li>- course attendance: min. 70% hours of lectures and exercises</li> <li>- preliminary exams: obligatory</li> <li>- accepted project work before the oral exam</li> </ul>	
<b>Exam</b>	Written exam and oral exam.	
<b>Assessment <sup>(1)</sup></b>	Preliminary exams, project work, lectures' attendance (70%), written exam (30%).	
<b>Literature</b>	<b>Essential:</b> 1. Simović, V.: Građevna statika I, Građevinski institut, Zagreb, 1988. 2. Kozulić, V.: Separati s predavanja (WEB stranica predmeta)  <b>Recommended:</b> 1. <b>Course:</b>	<b>STRUCTURE AND CHARACTERISTICS OD MATERIALS</b>	
<b>Course code:</b> MK-123	<b>Pre-requisites:</b>	<b>Hours of Active Classes:</b> 30 lectures: 30 exercises: 0 seminars: 0
<b>Course status:</b> mandatory	<b>The course consists of:</b> lectures                      exercises                      -	<b>ECTS:</b>   2.5
<b>Course objectives</b>	Students are introduced to the principles of materials science, which deals with structure of materials and its relation to properties of materials, and the behaviour of materials under mechanical loads.	
<b>Syllabus</b>	Atomic bonding (Ionic Bonds, Covalent Bonds, Metallic Bonds, Van der Waals Bonding). The Architecture of Solids (Crystalline State, Amorphous State, Polymeric State). Development of microstructure (Solidification, Phase Changes, Phase Diagrams). Surface Properties (Surface Tension, Adsorption, Capillary effects, Colloids). Response of Materials to Stress (Compression, Tension, Bending, Torsion). Failure and Fracture (Failure Theories, Fracture Mechanics). Rheology of Fluids and Solids (Elastic and Viscous Behaviour, Creep of Engineering Materials). Fatigue.	
<b>Student obligations</b>	Participation in all lectures and exercises. Preliminary exams.	
<b>Exam</b>	The exam is taken in written form.	
<b>Assessment <sup>(1)</sup></b>	Preliminary exams (70%), written exam (30%).	
<b>Literature</b>	<p><b>Essential:</b></p> <ol style="list-style-type: none"> <li>1. <b>Course:</b>	<b>STRUCTURAL MECHANICS II</b>		
<b>Course code:</b> TM-149	<b>Pre-requisites:</b> Inscribed Structural Mechanics I	<b>Hours of Active Classes:</b> 75 lectures: 45 exercises: 30 seminars: 0	
<b>Course status:</b> mandatory	<b>The course consists of:</b> lectures                  exercises                  -	<b>ECTS:</b>   6.5	
<b>Course objectives</b>	At the end of the course unit the student is expected to acquire a basis theoretical knowledge and practical methods of calculation of statically indeterminate constructions of engineering structures under the static loads.		
<b>Syllabus</b>	Methods for analysis of statically indeterminate constructions. Differential equations of elastic line. Energetic principles. Force method. Equations of continuity. Flexibility matrix. Centre of elastic displacement. Influence of coercive displacements. Influence of temperature changes. Calculation of statically indeterminate trusses. Determination of influential functions by the force method. Displacement method. Stiffness matrix. Condensation of the local stiffness matrix. Forces on fixed ends of the beam. Vector of equivalent load. Equations of the constructional system. Boundary conditions. Forming of the stiffness matrix of the constructional system. Calculation of various statically indeterminate constructions by the displacement method: orthogonal frames, symmetric girders, space structures, grid structures. Determination of the influential functions by the displacement method. Engineering displacement method. Movable and unmovable constructional systems.		
<b>Student obligations</b>	<ul style="list-style-type: none"> <li>- course attendance: min. 70% hours of lectures and exercises</li> <li>- preliminary exams: obligatory</li> <li>- accepted project work before the oral exam</li> </ul>

<b>Course:</b>	<b>ENGINEERING MATERIALS</b>
----------------	------------------------------

<b>Course code:</b> MK-124	<b>Pre-requisites:</b> Physics	<b>Hours of Active Classes:</b> 60 lectures: 30 exercises: 30 seminars: 0
<b>Course status:</b> mandatory	<b>The course consists of:</b> lectures                      exercises                      -	<b>ECTS:</b>  5.0

<b>Course objectives</b>	Students will get a basic knowledge about the materials used in civil engineering and their technology and they will be introduced to testing methods and standards for construction materials.
<b>Syllabus</b>	Particulate Composites. Portland Cement Concrete (Portland Cement, Admixtures, Cement Replacement Materials, Aggregates for Concrete). Properties of Fresh and Early Age Concrete. Deformation of Concrete. Strength and Failure of Concrete. Concrete Mix Design. Non-destructive Testing of Hardened Concrete. Inorganic and Mineral Binders. Physical Metallurgy. Mechanical Properties of Metals. Corrosion of Metals. Wood. Polymers and Plastics. Fiber-reinforced Composites.
<b>Student obligations</b>	Participation in all lectures and scheduled group laboratories. Submit a final laboratory reports. Preliminary exams.
<b>Exam</b>	The exam is taken in written form.
<b>Assessment <sup>(1)</sup></b>	Preliminary exams, laboratory exercises (70%), written exam (30%).
<b>Literature</b>	<b>Essential:</b> 1. Balabanić G., Materijali 2 - skripta 2. Balabanić, G.: Upute za praktikum iz građevinskih materijala – skripta. 3. Bjegović D., Balabanić G., Mikulić D.: Građevinski materijali – zbirka riješenih zadataka, Zagreb, 2007.  <b>Recommended:</b> 1. Ukrainczyk V: Poznavanje gradiva, Institut građevinarstva Hrvatske, Alcor, Zagreb, 2001. 2. Ukrainczyk V: Beton – struktura, svojstva, tehnologija, Alcor, Zagreb, 1994. 3. Illston J M, Domone P L J (ed.): Construction materials – their nature and behaviour, E & FN SPON Chapman & Hall, 1994. 4. Ashby M F, Jones D R: Engineering Materials 1, Butterworth Heinemann 1996.

<b>Course:</b>	<b>BASICS OF CONCRETE STRUCTURES</b>	
<b>Course code:</b> NK-135	<b>Pre-requisites:</b> Strength of Materials I, Structural Analysis II	<b>Hours of Active Classes:</b> 75 lectures: 45 exercises: 30 seminars: 0
<b>Course status:</b> mandatory	<b>The course consists of:</b> lectures exercises -	<b>ECTS:</b> 6.0
<b>Course objectives</b>	Students will acquire basic knowledge of the properties of the constitutive materials, the rules of design and construction of concrete structures. Students will be able to design simple concrete structures, to assist in the design of complex structures and to participate in the building of concrete structures. The acquired knowledge is also the basis for future technical and scientific education in the field of concrete structures and load-bearing structures in general.	
<b>Syllabus</b>	Generally of concrete structures. Properties of concrete and reinforcing steel. Condition of joint action of concrete and rebar. Bond, anchorage and continuing reinforcement. Shaping reinforcement. Design properties of materials. Minimum and maximum reinforcement areas. Design of rectangular and T-sections exposed to bending. Short elements subjected to compressive axial force with or without uniaxial bending. Elements subjected to tensile axial force with or without uniaxial bending. Local compressive stresses. Elements subjected to shear. Elements subjected to torsion. Design of slabs for punching. The effects of second order in the slender compression members at nominal curvature method. Limit states: Control of cracking without direct calculation and cases when the deflection calculation can be omitted. Design and structural principles of the basic reinforced structural elements: beams, slabs, columns, walls, corbels and deep beams. Floor structures. Reinforced concrete stairs. Reinforced concrete foundation. Frame structures. The basic principles of reinforced concrete building structures. The basic concepts of prestressed concrete.	
<b>Student obligations</b>	Course attendance, project work, preliminary exams.	
<b>Exam</b>	The exam is taken in written form.	
<b>Assessment</b> <sup>(1)</sup>	Course attendance, project work, preliminary exams (70%), written exam (30%).

<b>Course:</b>	<b>INTRODUCTION TO STEEL STRUCTURES</b>		
<b>Course code:</b> NK-136	<b>Pre-requisites:</b> Structural Mechanics I	<b>Hours of Active Classes:</b> 60 lectures: 30    exercises: 30    seminars: 0	
<b>Course status:</b> mandatory	<b>The course consists of:</b> lectures                      exercises                      seminars	<b>ECTS:</b>   5.0	
<b>Course objectives</b>	Ability to identify, formulate and solve engineering problems in the field of design of steel-framed structures.		
<b>Syllabus</b>	Need for and use of steel structures; Types of steel structures; Manufacturing from molten iron to steel in the past; Definition of basic steel characteristics (weldability of steel, brittle fracture, imperfections); Quality of steel in civil structural engineering; Loads, actions and partial safety factors; Safety concept: Ultimate Limit States and Serviceability Limit States; Dimensions, properties and classification of cross-sections; Resistance of cross-sections: compression, moment and shear resistance; Interactions; Resistance of members: buckling resistance and lateral torsional buckling; Members subjected to axial compression force and bending after Eurocode 3; Joints and connections: column to beam and column to foundation; Bolted and welded connections; Welding technologies; Design and construction of Single-storey, one way spanning buildings; Problems in construction and operations; Computer Aided Design and suitable software.		
<b>Student obligations</b>	Obligatory attendance to the course. Accepted project work before the end of the term.		
<b>Exam</b>	The exam is taken in written form.		
<b>Assessment</b> <sup>(1)</sup>	Preliminary exams (70%), written exam (30%).		
<b>Literature</b>	<p><b>Essential:</b></p> <ol style="list-style-type: none"> <li>1. Androić, B., Dujmović, D., Džeba, I., METALNE KONSTRUKCIJE 1, IGH, Zagreb, 1994.</li> <li>2. <b>Course:</b>	<b>FINAL YEAR PROJECT</b>	
<b>Course code:</b> ZR-PRED	<b>Pre-requisites:</b> The exam can be undertaken only after all other course exams have been passed	<b>Hours of Active Classes:</b> 30 lectures:      exercises:      seminars: 30
<b>Course status:</b> mandatory	<b>The course consists of:</b> -                      -                      seminars	<b>ECTS:</b>   5.0
<b>Course objectives</b>	The successfully passed final year project exam confirms that the student has, in the course of their studies, acquired the necessary skills to produce and present a major seminar work (project plan or a solution to a theoretical or practical civil engineering problem) in the area of planning and design of a simpler civil engineering structure or system.	
<b>Syllabus</b>	<p>The final year project is to be conducted during the total of 140 hours (ECTS 5), which includes 60 hours of active classes.</p> <p>The project subject can be practical or theoretical and has to be related to a civil engineering activity and the undergraduate courses. It is chosen by the student and confirmed by the board in charge during the sixth term and not later than 1 May of the running year.</p> <p>The final year project can be of the following types:</p> <ul style="list-style-type: none"> <li>- planning a simpler civil engineering facility (a smaller bridge, a road out of a city, a simpler system of water supply or discharge etc.)</li> <li>- building organisation project of a simpler facility</li> <li>- design of a concrete, steel or timber structure</li> <li>- analytical or numerical analysis of an engineering problem which requires additional theoretical insight</li> </ul> <p>The student collaborates closely with the supervisor, who is normally the teacher of the course thematically associated with the project. If necessary, a co-supervisor may also be nominated.</p>	
<b>Student obligations</b>	The student is expected to submit the working version of the project to the supervisor as a condition for the confirmation of the course. The final version of the project should be submitted to the supervisor and the General Office (two copies) at least seven working days before the tentative presentation date. The public exam (presentation) take place during the exam periods and the General Office notifies about the actual dates.	
<b>Exam</b>	The exam is conducted orally, through a public presentation of the project in front of the supervisor.	
<b>Assessment <sup>(1)</sup></b>	70% for the written project, 30% for the exam (presentation).	
<b>Literature</b>	<p><b>Essential:</b> Depending on the subject</p> <p><b>Recommended:</b> Depending on the subject</p>	

<b>Course:</b>	<b>ENGINEERING GEOMETRY</b>	
<b>Course code:</b> M-182	<b>Pre-requisites:</b>	<b>Hours of Active Classes:</b> 30 lectures: 10    exercises: 0    seminars: 20
<b>Course status:</b> optional	<b>The course consists of:</b> lectures                      -                      seminars	<b>ECTS:</b>   3.0
<b>Course objectives</b>	<ul style="list-style-type: none"> <li>- to acquire the knowledge about quadric surfaces and methods for constructive elaboration</li> <li>- interdisciplinary approach to geometry in engineering, computer graphics and object -shapes</li> <li>- to acquire the problem-oriented exercises, using computer graphics</li> <li>- to develop ability to identify, formulate and solve complex engineering geometric problems</li> </ul>	
<b>Syllabus</b>	<p>Computer graphics and CAGD -Computer Aided Geometric Design            Perspective projection and its use in CAD            Surfaces on objects. Introduction to theory of surfaces. Quadrics. Surface modelling in CAD.            Intersection of a quadric and a plane. Constructive methods in virtual 3D-space on computer.            Intersection of quadrics. Space quartic curves. Solid-modelling, transformations of primitives and constructive solid geometry            Tangent plane and normal in the regular point of the surface. Main and gaussian curvature of surfaces. 3D constructions using CAD.            Ruled surfaces. Ruled quadrics and CAD modelling. Ruled quadrics in civil engineering. Constructive elaboration.            Geometry of roofs            Quoted projection. Topographic surfaces. Tracing. Solving methods using profiles and contour lines.</p>	
<b>Student obligations</b>	<ul style="list-style-type: none"> <li>- course attendance</li> <li>- active collaboration- seminars</li> <li>- accepted project work before the end of the term</li> </ul>	
<b>Exam</b>	none	
<b>Assessment</b> <sup>(1)</sup>	Course attendance, tasks, preliminary exams (100%).

<b>Course:</b>	<b>INTRODUCTION TO LANGUAGE CULTURE</b>
----------------	-----------------------------------------

<b>Course code:</b> FD-199	<b>Pre-requisites:</b>	<b>Hours of Active Classes:</b> 30 lectures: 15 exercises: 15 seminars: 0
<b>Course status:</b> optional	<b>The course consists of:</b> lectures exercises -	<b>ECTS:</b> 2.0

<b>Course objectives</b>	The main course objective is mastering the basics of linguistic and grammar norms, in written as well as oral expression. Students will gradually become acquainted with accurate terminology as well as the uses of normative manuals (orthography, grammar, dictionaries, linguistic reference books et al.).
<b>Syllabus</b>	<p>Language as system and language as standard (system norms and norms of function); standard language and its norms; standard language realization and functional styles (stylistic norms); elements of grammar (morphological, syntactic) and lexical norm; normative reference books (grammar books, dictionaries, orthographic lexica) and their use.</p> <p>Written expression; orthographic norm; rules of orthography; spell checking and the use of spell-checkers; forms of written expression and text structure.</p> <p>Oral expression; orthoepic norms; values of spoken language (syntax melody, diction and accentuation); sentence as a unit of communication (expression); suprasyntactic unity (text, discourse); speech composition; forms of oral expression; rhetoric.</p> <p>Language in professional use; scientific style as one of the functional styles of standard language; characteristics and layers within styles (professional, popular-scientific, scientific etc.); terminology; terminological lexica; Croatian unilingual dictionaries; organization of scientific/professional text (written and/or spoken).</p>
<b>Student obligations</b>	Students are required to take active part in all aspects of course attendance; they will solve linguistic problems individually or in group assignments.
<b>Exam</b>	none
<b>Assessment <sup>(1)</sup></b>	Activity in class, preliminary exams (100%).
<b>Literature</b>	<p><b>Essential:</b></p> <ol style="list-style-type: none"> <li>1. Anić, Vladimir, Rječnik hrvatskoga jezika, Novi Liber, Zagreb 1998.</li> <li>2. <b>Course:</b>	<b>CIVIL ENGINEERING REGULATIONS</b>	
<b>Course code:</b> OA-156	<b>Pre-requisites:</b>	<b>Hours of Active Classes:</b> 30 lectures: 30    exercises: 0    seminars: 0
<b>Course status:</b> optional	<b>The course consists of:</b> lectures                    -                    -	<b>ECTS:</b>   3.0
<b>Course objectives</b>	The aim of the course is to provide the students, future civil engineers, with the knowledge of basic legal notions, categories, institutes and law relationships in civil engineering in a broader sense.	
<b>Syllabus</b>	Introduction to law: notions, categories, institutes, legal relationships. Regulations on civil engineering. Commercial companies in the industry of construction materials, projects and construction. Relationship with the State. Procedures. Control. Inspections. Individual legal acts. Court procedures.	
<b>Student obligations</b>	Seminar paper, preliminary exam, exam	
<b>Exam</b>	Written and oral exam.	
<b>Assessment <sup>(1)</sup></b>	Preliminary exams, seminars (70%), exam (30%).	
<b>Literature</b>	<p><b>Essential:</b></p> <p>1. UČUR, Marinko. Građevinska regulativa, Građevinski fakultet, Rijeka, 2004; Ustav RH, Zakon o gradnji.</p> <p><b>Recommended:</b></p> <p>1. Zakon o obveznim odnosima; Zakon o vlasništvu i drugim stvarnim pravima; Zakon o radu; Zakon o zaštiti na radu; Pravilnici po Zakonu o gradnji.</p>	

<b>Course:</b>	<b>BRIDGES</b>	
<b>Course code:</b> NK-134	<b>Pre-requisites:</b> Engineering Materials	<b>Hours of Active Classes:</b> 60 lectures: 30 exercises: 15 seminars: 15
<b>Course status:</b> mandatory	<b>The course consists of:</b> lectures - seminars	<b>ECTS:</b> 5.0
<b>Course objectives</b>	The student is expected to acquire a basic knowledge and understanding of bridge building.	
<b>Syllabus</b>	<ul style="list-style-type: none"> <li>- History of bridge construction; general information on bridges; bridge types; elements of bridge disposition; traffic conditions and external effects</li> <li>- Load carrying bridge structures; Substructure; Bridge equipment</li> <li>- Elements of bridge design</li> <li>- Bridge construction; Maintenance of bridges; Safety standards for bridges</li> <li>- Bridges under extreme conditions; Achievements and future developments in bridge construction</li> </ul>	
<b>Student obligations</b>	Attendance to the course has to be in accordance to the Faculty regulations. It is compulsory to attend an organized visit to the bridge building sites.	
<b>Exam</b>	The exam is taken in written form.	
<b>Assessment <sup>(1)</sup></b>	Preliminary exams, project work seminar (70%), written exam (30%).	
<b>Literature</b>	<p><b>Essential:</b></p> <ol style="list-style-type: none"> <li>1. Štimac, I.: Skripta s predavnjima</li> <li>2. Radić, J.: Mostovi, Dom i svijet, Zagreb, 2002.</li> <li>3. Tonković, K.: Oblikovanje mostova, Tehnička knjiga, Zagreb, 1985.</li> </ol> <p><b>Recommended:</b></p> <ol style="list-style-type: none"> <li>1. Šram, S.: Gradnja mostova, Golden marketing, Zagreb, 2002.</li> <li>2. Tonković, K.: Mostovi u izvanrednim okolnostima, Školska knjiga, Zagreb, 1989.</li> </ol>	

<b>Course:</b>	<b>INTRODUCTION TO TIMBER STRUCTURES</b>	
<b>Course code:</b> NK-137	<b>Pre-requisites:</b> Strength of Materials	<b>Hours of Active Classes:</b> 60 lectures: 30 exercises: 30 seminars: 0
<b>Course status:</b> mandatory	<b>The course consists of:</b> lectures                      exercises                      -	<b>ECTS:</b>   5.0
<b>Course objectives</b>	The basic knowledge of properties, conditions and ways of timber application enables acquisition of limited competence. A student should be capable, either independently or as a team member, of designing the timber structures of simpler static systems and shorter spans. The course is a base for further education in T.Str. and overall Str. Eng. studies.	
<b>Syllabus</b>	A general survey of timber structures: historical development and modern systems. Material properties of wood: characteristics and classification of timber in structural engineering. Fire-fighting safety, protection and durability of timber structures. Elements of timber structures: proofs of mechanical resistance and stability (EC5). Connectors in timber structures: nails, screws, bolts, wood screws, clamps, dowels, glues, patent connectors, connecting steel plates. Bearing capacity of joints (EC5). Connection details of traditional timber structure elements: constructive carpentry joints, static connections and extensions, design and shaping. Design outlines of traditional timber roofs. Plane frame systems: modelling, designing of elements and characteristic details. Truss systems: modelling, design of elements and joints. Design basics of compound compressive cross-sections: yielding. Glulam girders: basics of design and shaping. Spatial stability of timber structures: bracing.	
<b>Student obligations</b>	Elaboration of a shortened main project of a timber structure (disposition, static models, mechanical resistance and stability of the entire structure and its elements, design and shaping of details). Realisation of programmes is adjusted to a firmly set dynamics of the auditor (40%) and constructive exercises (60%).	
<b>Exam</b>	The exam is taken in written form.	
<b>Assessment</b> <sup>(1)</sup>	Project work, activity in class, preliminary exams (70%), written exam (30%).	
<b>Literature</b>	<p><b>Essential:</b></p> <ol style="list-style-type: none"> <li>1. <b>Course:</b>	<b>RAILWAY ENGINEERING</b>
----------------	----------------------------

<b>Course code:</b> P-163	<b>Pre-requisites:</b> Introduction to Road Design	<b>Hours of Active Classes:</b> 60 lectures: 45    excercises: 15    seminars: 0
<b>Course status:</b> optional	<b>The course consists of:</b> lectures                    excercises                    -	<b>ECTS:</b>   5.0

<b>Course objectives</b>	Student is trained to participate in railway elaboration and construction process on track bed structure and track substructure.
<b>Syllabus</b>	<ul style="list-style-type: none"> <li>-Railway like a mean of transportation</li> <li>-Historic overview of railway and development</li> <li>-Classification of railway lines and trains</li> <li>-Cross section of railway</li> <li>-Track bed structure and track substructure</li> <li>-Track construction, rails and sleepers</li> <li>-Calculation of stresses; dimensioning of rails, sleepers, ballast and formation level</li> <li>-Basis of rail route design; railway project elements</li> <li>-Railway maintaining and reconstruction</li> <li>-Railway stations</li> <li>-Track device: switch, turntable, rail expansion joint</li> </ul>
<b>Student obligations</b>	-accepted project work before specified date, preliminary exam
<b>Exam</b>	Written and oral exam.
<b>Assessment <sup>(1)</sup></b>	Project work, preliminary exams (70%), written exam (30%).
<b>Literature</b>	<p><b>Essential:</b></p> <ol style="list-style-type: none"> <li>1. Marušić, D., Projektiranje i građenje željezničkih pruga, GF Split, Split, 1994</li> <li>2. Pollak, B., Željeznički gornji stroj, FGZ, Zagreb, 1982</li> </ol> <p><b>Recommended:</b></p>

### 3.2.2. Explanation of ETCS credits

The number of hours of active classes for all the proposed courses has been calculated on the basis of the assumed average duration of one term of 15 (fifteen) weeks (the average duration of the academic year is 30 weeks). The programme includes three regular examination periods of 4 (four) weeks each.

The proposed duration of the academic year is a total of 42 working weeks: 2x15 weeks of classes and 3x4 weeks of examination periods.

During the academic year the student gains a minimum of 60 ECTS credits for all the proposed programmes.

In view of the above mentioned, the calculation of the number of hours that make one ECTS credit would be: 1 ECTS = 42 (weeks) X 40 (working hours per week) / 60 ECTS = 1.680 hours / 60 ECTS = 28 hours.

**1 ECTS CREDIT is equivalent to 28 hours of the student's study load**

**The number of ECTS credits allocated to the particular courses** has been calculated on the basis of the complexity of the course teaching material (syllabus) and the general and specific obligations the student has to fulfill in connection with the course:

- the general obligations include an estimate of: the time needed to attend classes, tutorials, prepare exams, take exams, as well as of the quantity of literature he uses to prepare the exam.
- specific obligations include an estimate of the time needed for: preliminary exams, project work, seminar work, laboratory practice, fieldwork, visiting construction sites etc.

**The course load coefficient is determined in proportion to the course share in the workload of the particular term** so that the student gains 30 ECTS credits per term.

### 3.2.3. Quality assurance procedures and course (module) performance indicators

The performance of all the courses will be continuously monitored by different procedures of evaluation and self-evaluation of teachers and students.

The evaluation of the teachers and teaching activities will be carried out by the course lecturers (teachers) and will be organized by the Faculty body responsible for monitoring and identifying actions needed for the improvement of quality of the programme.

**Different procedures and methods for monitoring and evaluating the quality of the teaching activities and the course performance will be used:**

- **conducting research and opinion polls among students on all the aspects of teaching:**
  - **regular course delivery and organization of the teaching process**
  - **literature**
  - **methods for improvement of teaching**
  - **exams**
  - **syllabus and methodology of delivery**
  - **student / teacher relations and collaboration**
  - **work load – ETCS CREDITS**
- **publishing the results of research and opinion polls**
- **analysing the exam results (pass rate, transparency, objectivity and the like).**

The quality of the teaching performance of the particular courses will be evaluated twice during the term: for the first time 3-4 weeks after the beginning of the classes and for the second time during the last week the classes are taken. The results of the first evaluation may improve the teaching activities in the current term.

All research and questionnaires will be conducted on forms prepared in advance, in which the teachers will be able to adapt the questions to the course curriculum, methodology and other specific demands that the course has to meet.

The course lecturer will, independently and/or in coordination with the responsible persons at the Faculty, work out the plan of measures for better learning results in a particular course.

### 3.3. STUDY STRUCTURE

- In the first year of study a student enrolls in courses according to the program as follows:

	<b>COURSE</b>	<b>Hours of active classes (L+E+S)</b>	<b>Exam / Preliminary exam</b>	<b>ECTS</b>	<b>Semester</b>
1	Linear Algebra	30+30+0	Exam	6,0	<b>1<sup>st</sup> winter</b>
2	Mathematical Analysis I	45+45+0	Exam	7,5	
3	Mechanics I	30+30+0	Exam	5,5	
4	Computers and Information Science	30+25+5	Exam	4,5	
5	Constructive Geometry	45+15+30	Exam	6,0	
<b>Total</b>		<b>360</b>		<b>30,0</b>	
1	Physics	45+15+0	Exam	4,5	<b>2<sup>nd</sup> summer</b>
2	Strength of Materials I	30+30+0	Exam	5,5	
3	Mechanics II	30+30+0	Exam	5,5	
4	Geodesy	30+15+0	Exam	3,5	
5	Civil Engineering Structures	30+15+0	Exam	4,0	
6	Foreign Language	30+0+30	Preliminary exam	3,5	
7	Optional course of group I	30	Preliminary exam	3,0	
<b>Total</b>		<b>360</b>		<b>30,0</b>	

Sport and recreational activities coordinated through the Physical Training and Health Culture (1.0 ECTS) will be organized for students.

- Foreign Language: student chooses one of the offered languages.

	<b>FOREIGN LANGUAGE</b>	<b>Hours of active classes (L+E+S)</b>	<b>Exam / Preliminary exam</b>	<b>ECTS</b>	<b>Semester</b>
1	The English Language	30+0+30	Preliminary exam	3,0	<b>2<sup>nd</sup> summer</b>
2	The German Language				

- Enrollment in the second and subsequent years of study is defined in Article 34 Decision of Amendments of Regulations on Studies at the University of Rijeka and Prerequisites under Section 3.3.2.1. of this study program.

	<b>MANDATORY COURSE</b>	<b>Hours of active classes (L+E+S)</b>	<b>Exam / Preliminary exam</b>	<b>ECTS</b>	<b>Semester</b>
1.	Mathematical Analysis II	45+45+0	Exam	7,5	<b>winter</b>
2.	Strength of Materials II	30+30+0	Exam	5,5	
3.	Applied Geology	30+5+0	Exam	3,0	
4.	Structural Mechanics I	45+30+0	Exam	6,5	
5.	Structure and Characteristics of Materials	30+0+0	Exam	2,5	
6.	Hydrology	30+15+0	Exam	3,0	
7.	Basics of Concrete Structures	45+30+0	Exam	6,0	
8.	Introduction to Steel Structures	30+30+0	Exam	5,0	
9.	Introduction to Hydraulic Engineering	30+30+0	Exam	5,0	
10.	Construction Management and Technology	45+30+0	Exam	6,0	
11.	Geotechnical Engineering	45+30+0	Exam	6,0	

	<b>MANDATORY COURSE</b>	<b>Hours of active classes (L+E+S)</b>	<b>Exam / Preliminary exam</b>	<b>ECTS</b>	<b>Semester</b>
12.	Soil and Rock Mechanics	45+20+10	Exam	5,5	<b>summer</b>
13.	Structural Mechanics II	45+30+0	Exam	6,5	
14.	Fluid Mechanics	30+30+0	Exam	5,5	
15.	Introduction to Road Design	30+30+0	Exam	4,5	
16.	Engineering Materials	30+30+0	Exam	5,0	
17.	Construction Economics	30+15+0	Exam	4,0	
18.	Fieldwork	0+30+0	Preliminary exam	3,0	
19.	Final Year Project	0+0+30	Exam	5,0	

- Elective Courses Groups I-V: the student chooses one of the courses offered within each group of courses, summer or winter semester. The student is required to choose one elective subject from the elective course groups I-V.

<b>Group</b>	<b>ELECTIVE COURSES</b>	<b>Hours of active classes (L+E+S)</b>	<b>Exam / Preliminary exam</b>	<b>ECTS</b>	<b>Semester</b>
<b>I</b>	Engineering Geometry	10+0+20	Preliminary exam	3,0	<b>summer</b>
	Computer Applications	10+10+10			
	Introduction to Programming	10+20+0			
<b>II</b>	Communication Skills	15+15+0	Preliminary exam	2,0	<b>winter</b>
	Introduction to Language Culture	15+15+0			
	Construction History	15+0+15			
	Building and Constructing English	15+10+5			
<b>III</b>	Introduction to Spatial Planning	30+0+15	Preliminary exam	3,0	<b>summer</b>
	Building Design	15+30+0			
<b>IV</b>	Introduction to Building Physics	20+0+10	Preliminary exam	2,0	<b>winter</b>
	Environmental Protection	15+0+15			
<b>V</b>	Management in Civil Engineering	30+0+15	Exam	3,0	<b>summer</b>
	Civil Engineering Regulations	30+0+0			

- Elective Course Group VI: student chooses 3 of the offered 6 courses:

<b>Group</b>	<b>ELECTIVE COURSES</b>	<b>Hours of active classes (L+E+S)</b>	<b>Exam / Preliminary exam</b>	<b>ECTS</b>	<b>Semester</b>
<b>VI</b>	Bridges	30+15+15	Exam	5,0	<b>summer</b>
	Introduction to Timber Structures	30+30+0			
	Introduction to Coastal Engineering	30+30+0			
	Water Resources and Systems	30+0+30			
	Urban Roads and Intersections	30+30+0			
	Railway Design	45+15+0			

### 3.3.1 Study Dynamics

Study Dynamics is pursuant to article 3.3

### 3.3.2 Student Requirements

Student requirements are defined by valid regulations, especially by Regulations on Studies of University of Rijeka and its Amendments and course curricula defined by the study program (article 3.2.1 Course Description). Specific requirements are defined in the Regulation on studies of the Faculty of Civil Engineering of University of Rijeka.

#### 3.3.2.1 Enrollment requirements for the subsequent academic year

Student requirements are defined by valid regulations, especially by Regulations on Studies of University of Rijeka and its Amendments and course curricula defined by the study program. Specific requirements are defined in the Regulation on studies of the Faculty of Civil Engineering of University of Rijeka.

#### 3.3.2.2. Pre-requisites for courses enrolment

	<i>Course Code</i>	<i>COURSE</i>	<i>PRE-REQUISITES (PASSED EXAM)</i>
1.	M-181	Mathematical Analysis II	Mathematical Analysis I (M-183)
2.	TM-146	Strength of Materials II	Strength of Materials I (TM-145)
3.	G-104	Applied Geology	Constructive Geometry (M-180)
4.	TM-149	Structural Mechanics I	Mechanics I (TM-147)
5.	G-106	Soil and Rock Mechanics	inscribed Applied Geology * (G-104)
6.	TM-149	Structural Mechanics II	Inscribed Structural Mechanics I* (TM-150)
7.	H-115	Fluid Mechanics	Mechanics II (TM-148)
8.	P-165	Introduction to Road Design	Geodesy (P-164)
9.	MK-124	Engineering Materials	Physics (FD-198)
10.	NK-135	Basics of Concrete Structures	Strength of Materials I, Structural Mechanics II
11.	NK-136	Introduction to Steel Structures	Structural Mechanics I (TM-150)
12.	H-118	Introduction to Hydraulic Engineering	Fluid Mechanics (H-115)
13.	OA-147	Construction Management and Technology	Structure and Characteristics of Materials (MK-123)
14.	G-107	Geotechnical Engineering	Soil and Rock Mechanics (G-106)
15.	OA-148	Construction Economics	inscribed Construction Management and Technology *
16.	OA-149	Fieldwork	achieved 120 ECTS *
17.	ZR-PRED	Final Year Project	achieved 120 ECTS *
18.	NK-134	Bridges	Engineering Materials (TM-148)
19.	NK-137	Introduction to Timber Structures	Strength of Materials II (TM-146)
20.	H-119	Introduction to Coastal Engineering	Hydrology (H-117)
21.	H-114	Water Resources and Systems	Hydrology (H-117)
22.	P-167	Urban Roads and Intersections	Introduction to Road Design (P-165)
23.	P-163	Railway Design	Introduction to Road Design (P-165)

### 3.4. LIST OF COURSES THE STUDENTS CAN ENROLL INTO AT OTHER COURSES OF STUDY

Students are allowed to enroll into other courses taught at other courses of study at the Faculty of Civil Engineering in Rijeka or another high education institution. The earned ECTS credits will be accepted pursuant to article 3.6 of this study program.

Committee for Academic Evaluation and Evaluation of Study Duration can allow the student to take the elective course from the list of offered courses carrying up to 5 ECTS credits at another faculty of University of Rijeka.

### 3.5. LIST OF COURSES THAT CAN BE OFFERED IN FOREIGN LANGUAGE

	<b>Course Code</b>	<b>COURSE</b>	<b>Foreign language in which the course can be offered</b>
1.	M-178	Linear Algebra	English Language, Italian Language
2.	M-183	Mathematical Analysis I	English Language, Italian Language
3.	TM-147	Mechanics I	English Language
4.	TM-148	Mechanics II	English Language
5.	TM-145	Strength of Materials I	English Language
6.	TM-146	Strength of Materials II	English Language
7.	H-117	Hydrology	English Language
8.	H-119	Introduction to Coastal Engineering	English Language, Italian Language
9.	OA-154	Construction History	English Language, Italian Language
10.	OA-157	Civil Engineering Structures	English Language, Italian Language
11.	MK-122	Introduction to Building Physics	English Language, Italian Language

### 3.6. CRITERIA AND CONDITIONS FOR TRANSCRIPTION OF ECTS

ECTS credits that the student acquires with enrollment of courses at another faculty of University of Rijeka or any other University during this study, which are not the same as this study courses, will be registered in student's Diploma supplement.

For transcription of the ECTS acquired on identical courses (the difference in the content of up to 30%) at civil engineering faculties in Croatia (at universities of Zagreb, Split and Osijek), institutions of higher education at the University of Rijeka and those faculties with which the university has signed a cooperation agreement does not require special decisions.

Recognition of exams is regulated by Regulation on studies of the Faculty of Civil Engineering of University of Rijeka.

### 3.7. COMPLETION OF THE STUDY

Study is completed successfully passed all the programs prescribed exam, satisfied all other obligations to the studio and writing and oral exam (public presentation) final work to the supervisor. It is preferable that other teachers and students attend the final exam (presentation).

### 3.8. CONDITIONS FOR CONTINUATION OF THE STUDY FOR STUDENTS WHO INTERRUPTED THE STUDY

Students who interrupted the undergraduate university degree study can re-enter within the next five (5) academic years. By re-entering they accept all changes of the program made during their absence from the study. All passed exams and completed courses which are identical to those under the current program are recognised.
